

ACCESS • ACCOUNT DETAILS • SETUP COORDINATION

Meta leads & WhatsApp integration

Please complete this checklist so we can connect the client's enquiries and business WhatsApp to the CRM.

Our aim is to import new Facebook and Instagram Instant Form enquiries without downloading and uploading spreadsheets, and to connect WhatsApp for the agreed customer communication workflow.

01 • Identify

Confirm the client's accounts, lead forms and WhatsApp number.

02 • Share access

Invite the integration contact and assign the relevant assets.

03 • Set up together

We handle technical configuration, then test with your team.

No technical knowledge is required. Complete what you can. Write "Not sure", "Not set up" or "Client admin needed" where applicable. We can find the remaining details together on a screen-sharing call.

Agency and client contact details

Agency name

Client / business name

Agency contact name and role

Email and contact number

Client's Meta account administrator

Administrator's contact details

Preferred setup call date / time

Completed by / date

Before the setup call

- ☐ Have a laptop and access to the correct Meta business account.
- ☐ Invite the person who can approve access and manage the WhatsApp number.
- ☐ Keep a running lead ad and the current WhatsApp app/dashboard available.

Please return this document with non-secret details, or provide your responses in an email using the same section numbers. Share passwords, access tokens and app secrets only through an agreed secure channel; do not enter them in this PDF.

Find the correct accounts

Open business.facebook.com/settings and select the client's business. Menu labels may vary; look for "More business settings" if needed.

What we need	Where to find it / what to do	Your response
Business Portfolio Business name and ID	Business Settings → Business info / Business portfolio info . Record the name and numeric ID.	Name / ID: _____ _____
Account ownership Client or agency?	Confirm who owns the business portfolio, Facebook Page and ad account. Tell us if they belong to different businesses.	☐ Client ☐ Agency Details: _____
Facebook Page Name, link and Page ID	Business Settings → Accounts → Pages → select the Page. Include each branch Page that receives enquiries.	_____ _____ _____
Ad account Name and ID	Business Settings → Accounts → Ad accounts , or the account selector in Ads Manager . Show us the relevant campaigns.	_____ _____
Access invitation Assign relevant assets	Users → People → Invite people . Confirm Sajad's invitation email during coordination. If sharing with another business, use Partners and its Business ID.	☐ Invited ☐ Pending ☐ Need help
Leads access Permission to read enquiries	Look under Integrations → Leads access . Select the Page. If customized access is enabled, assign the relevant people/partner and CRM connection when available.	☐ Checked ☐ Pending ☐ Need help
Developer app If one already exists	Open Meta for Developers → My Apps . Record the app name, App ID and owner. If none exists, we can arrange setup.	☐ Exists ☐ Not set up Name / ID: _____

Page access and leads access are separate checks. Seeing the Page or managing ads does not by itself confirm that the CRM can retrieve submitted lead details. We will test the actual permissions.

Please have the asset owner approve the required permissions. Prefer client ownership of the assets and invite named people or partners. A personal Facebook password is not required for this handover.

Tell us which leads to import

Open **Meta Business Suite** → **All tools** → **Instant forms**. Preview the forms used by your active ads. If a Form ID is not visible, provide the name and Page; we can retrieve its ID after receiving access.

Enquiry sources in use

- ☐ Facebook / Instagram Instant Forms ☐ Website forms
☐ Click-to-WhatsApp ads ☐ Instagram / Messenger messages ☐ Not sure

This lead-form setup covers Instant Forms. Website forms, direct messages and WhatsApp enquiries need their own connection. Please show one running ad from each source you use.

Form 1

Form name / ID

Facebook Page / Page ID

Campaign / branch / model

Import this form? Yes / No

Form 2

Form name / ID

Facebook Page / Page ID

Campaign / branch / model

Import this form? Yes / No

Attach a separate list for more forms. Include inactive forms only if you want us to assess historical imports.

Field names and sample answers

Provide a form preview or sample export with real customer details removed. Include the exact question labels and available choices.

CRM information	Exact form question / field	Example or mapping notes
Name and phone Required for import		Use a test name and number.
Email / city / location		
Interested vehicle model		Attach all model choices.
Branch / campaign		State any fixed branch/model per form.

New leads only, or historical leads too?

Who will notify us about new / changed forms?

We will confirm the activation date and any historical import separately. New or duplicated forms can have different IDs and must be added to the agreed configuration.

Confirm the WhatsApp setup

We first need to identify how the client uses WhatsApp today. Complete the applicable route; “Not set up” is a valid response.

- ☐ WhatsApp Business app on a phone ☐ Direct Meta Cloud API
☐ Provider such as WATI / Interakt / AiSensi ☐ New setup / not sure

What we need	Where to find it / what to confirm	Your response
Sender number Include country code	Confirm the number customers should see. Identify its owner and the person available to receive an SMS or verification call during setup.	Number / owner: _____ _____
Existing provider If applicable	Give the provider's name and dashboard link. Confirm whether the plan supports API access, incoming-message webhooks and delivery updates. Share its API documentation.	Provider / plan: _____ _____
WABA ID WhatsApp Business Account ID	Business Settings → Accounts → WhatsApp accounts → select account. Record its ID and owning business. This differs from the Business Portfolio ID.	Account / ID: _____ _____
Phone Number ID For direct Meta API	Developer dashboard → app → WhatsApp → API Setup / Getting Started . Select the real business number. This internal ID differs from the phone number.	_____ ☐ Need help ☐ Not set up
Approved templates Message name and language	Business Suite → All tools → WhatsApp Manager → Message templates . Provide text, names, language codes, variable fields and approval status.	☐ List attached ☐ None yet ☐ Need help
Billing / verification Status and contact	Check WhatsApp Manager's payment settings and Business Settings → Security Center . Identify who can add billing or submit business documents if requested.	Contact / status: _____ _____

Do staff need to keep using the phone app? Yes / No / Not sure

Tell us before making changes. We will check the available coexistence or migration route. Keep the existing number and account in place while we assess the setup.

The number owner should enter verification codes and any required two-step verification PIN during setup. Do not record those codes or PINs here. For a provider connection, we will use that provider's supported credentials and onboarding process.

Credentials and connection setup

Your team does not need to generate these alone. Once the correct administrator joins, we can configure the connection together.

Record status only. Do not write secret values in this document.

Requirement	Source / responsibility	Status
Meta App ID + App Secret Leads / direct WhatsApp	Developer dashboard → app → App settings → Basic . The App ID is an identifier; the App Secret is confidential. Confirm which app serves each integration.	☐ Available ☐ To create ☐ Need help
Meta lead access token Authorized for selected Pages	Developer generates or obtains the token through the supported app authorization / system-user route after assigning assets. Validate lead retrieval and Page access with a test.	☐ To generate ☐ To validate ☐ Confirmed
WhatsApp production token Direct Meta route only	Business Settings → Users → System users → assign app and WhatsApp assets → Generate token . Configure appropriate expiry and permissions; avoid temporary test tokens for production.	☐ To generate ☐ To validate ☐ N/A
Provider API credentials Existing-provider route	Obtain API key/token, account identifiers and webhook instructions from the provider's settings or support team. Confirm API features included in the current plan.	☐ Requested ☐ Available ☐ N/A
Webhook URL + verify token Generated by developer	We provide the callback URL and verification value, then configure subscriptions. A webhook tells the CRM when a lead, message or delivery update arrives.	☐ To configure ☐ Tested
App access / approval checks Developer + asset owner	Check app mode, permission access levels, App Review and business verification requirements for the actual ownership arrangement. Supply privacy-policy and data-deletion information where required.	☐ To review ☐ Pending ☐ Complete

Developer verification notes

Meta leads: verify `leads_retrieval`, `pages_manage_metadata` for Page subscriptions, and supporting Page/advertising permissions required by the chosen workflow. Configure the Page's `leadgen` subscription and verify lead retrieval. Final permissions depend on the implementation and asset ownership.

Direct WhatsApp: validate `whatsapp_business_messaging` and `whatsapp_business_management`; add other permissions only where required. Configure the message webhook and subscribe the app to the intended WABA. Tokens remain revocable even without a scheduled expiry.

Credential handover: use an agreed password manager or secure secret-sharing method. We store credentials on the CRM server. Share only account IDs, access status and contact details in the returned checklist.

Agree how the integration works

Please confirm these decisions so the connection follows the client's sales process.

Decision	Choice / response
When should WhatsApp send?	☐ On new enquiry ☐ After qualification ☐ After salesperson assignment ☐ Manual action Other / details: _____
Message content and language	Who approves the welcome, salesperson introduction and reassignment messages? Which languages are needed? _____
Customer permission	Attach the form's consent wording and explain how permission to send messages is captured and recorded. _____
Replies and opt-outs	Reply owner / team: _____ ☐ CRM ☐ Provider inbox ☐ Phone app, if supported Who handles requests to stop messages? _____
Routing and assignment	Confirm the branch for each form and who assigns new enquiries to sales staff. Note any requested automatic assignment rules. _____
Billing and launch approval	Billing owner: _____ Person approving the test and launch: _____

WhatsApp requirements: receiving a phone number alone does not establish permission for subsequent WhatsApp messages. The business must obtain opt-in and respect opt-outs. Business-initiated conversations use approved templates; free-form replies are allowed within 24 hours of the customer's last message. See the [WhatsApp Business Messaging Policy](#).

Joint test before launch

- ☐ Submit an agreed test lead through each selected form.
- ☐ Confirm CRM name, phone, model, branch and campaign mapping.
- ☐ Confirm duplicate / incomplete enquiries follow the review process.
- ☐ Send the agreed WhatsApp template to a consenting test recipient.
- ☐ Verify delivery updates and replies for the agreed workflow.
- ☐ Record approval, activation time and a contact for future account changes.

Current CRM scope: Meta lead intake supports selected forms; valid new enquiries enter the unassigned pool, and exceptions require review. WhatsApp currently supports message previews. Live sending and the agreed reply workflow require provider integration and testing before launch.

What to send back

Please return the completed checklist and the supporting items below. If access is missing, name the person who can provide it.

- ☐ Agency contact and client account administrator details.
- ☐ Business Portfolio, Facebook Page and ad account names / IDs.
- ☐ Access invitation status, including leads access.
- ☐ Selected forms, Page IDs and form IDs where available.
- ☐ Form previews or anonymized samples, model choices and branch mappings.
- ☐ WhatsApp number, current setup and provider details, if applicable.
- ☐ WABA / Phone Number IDs and approved templates, where available.
- ☐ Consent wording, message workflow, reply owner and billing contact.
- ☐ Pending items and availability for the joint setup call.

Outstanding items / responsible person / expected date
